

Responsible Person or person having control of the premises:	The Gap Club Ltd – Rekha Bassi (Director)
Address of premises:	Gap Club summer Camp @ Staines Staines Preparatory school Gresham Road, Staines. Tw18 2BT
Risk Assessment Activity:	Assessment of: Working practices – All Settings and Head Office This risk assessment should directly address risks associated with Coronavirus (COVID-19), so that sensible measures can be put in place to control those risks for children/staff /parents and all service users.
Name of Reviewer/ Assessor:	Rekha Bassi
Position of Reviewer/ Assessor:	Health & Safety Officer
Date of Review/risk assessment:	Jun-2020
Date of previous risk assessment:	
Date of assessment review:	Ongoing
Overall Level of risk, (High, Medium, Low)	Medium
Name of & Signed by assessor:	Rekha Bassi Alex Kear-Hill (9/7/2020)

Risks Contents

1	Mo	overnent of persons around the building	:
	1.1	Entrance and exit to childcare setting causing people to congregate compromising social distancing	
	1.2	Travel and outings	
	1.3	Increased Numbers during breaks and lunchtimes compromising social distancing	4
	1.4	Inadequate social distancing measures leading to spread of the virus	
2	Chi	ildren On Site	
	2.1	Hygiene/ Movement and Well being	
	2.2	Children with EHCP or Vulnerable children	
	2.3	Vulnerable groups who are clinically, extremely vulnerable	
	2.4	Vulnerable groups who are in the clinically vulnerable category	
	2.5	Children unable to follow guidance	
	2.6	Child or staff becoming ill in a bubble group.	
3	Pro	ovision of FOOD	
	3.1	Kitchen facilities/ staff and practice comply to Covid-19 to extra precautions to limit infection spread.	
4		mmunications with Parents and Others	11

1.2	Travel and outings	Staff Children Visitors	*use pen to sign *pen will be wiped clean by staff *gloves(all) disposed of in lidded bins No trips allowed If leaving the premises is necessary, inform lead manager, ensure hands are washed before leaving and sanitised and washed on return	1	2	2	Very Low			
			Staff are asked to eat lunches on site. If possible do not use public transport to and from work. If necessary – you must wear a face mask which disposed of at club in Covid bins or if reusable placed in a plastic bag in staff belongings. Hands washed after.							
1.3	Increased Numbers during breaks and lunchtimes compromising social distancing	Staff Children	Keep to small daily groups (a bubble), with no more than 8-10 *children per small group and adhere to the EYFS ratios. Government guidance (02/07) bubble sizes can be 15 for year 1 upwards but as far as possible be small and consistent. Nursery and Year R— government guidance on 02/07, advise that bubbles are no longer required as this group are considered to have the lowest risks.	3	3	12	Medium	Encourage staff to be sensible about breaks, to ensure they remain in one place during lunch and do not allow bubbles to cross. AKH		
			*Staines Prep Summer Camp (dependent on building/room size) – bubble sizes will aim to be 8-10, St Jude's CofE – 15/16, keeping to EYFS ratios. 2 staff / bubble for St Jude's Activities / tables to be spaced as far apart as possible. Set							
			up of bubble rooms as far as possible will be to ensure access to outside space is free flow (times to be staggered) and that age appropriate equipment and resources are placed in rooms. Bubble rooms /groups will not be able to mix indoors and outdoors and use of communal space eg hall will be staggered so that no more than 1-2 bubbles in							

	Persons at Risk &		С	urr	ent	Risk Level	E alba a Calabada	Action By who	
Hazard	How They may be Harmed	Controls Currently in Place	L	s	R	Risk Rating	Further Controls Recommended	& When	Done
		zoned /divided sections of hall will be present, e.g two bubbles indoors, two bubbles outdoors.							
		Outdoors areas will be zoned for individual bubbles and their use staggered to reduce movement around the setting							
		Staggered lunchtimes in bubble groups with hand washing stations, tables kept apart. Supervised by HCM/ out of ratio. Children was hands before and after.							
		HCM to supervise lunches in socially distanced manner without entering a bubble. If direct care is required at lunch for any reason, the key worker from that bubble will be recalled to attend. First aid – HCM to attend to needs outside of bubble. PPE will be worn.							
		Lunch to be eaten as much as possible – outdoors with additional staff to supervise.							
		Cleaning of tables, chairs, all surfaces / areas etc between uses by different bubble groups.							
		Playtimes- supervised by bubble keyworkers and /or HCM. Children in bubble zones at playtime maximising distance apart and playing with resources that belong to that bubble group or that have been rotated as 'clean stock' Cleaning stations outside. First Aid station Outside.							
		Rooms divided up to keep groups separate, using tables and floor markings to denote separate areas. Hallways marked up to denote one-way flow and limit overcrowding.

8 RISK INFORMATION & DEFINITIONS

Risk Assessment Information

This risk assessment is based on the 5 Steps to Risk Assessment model and uses numerical values to calculate the levels of risk.

Our Health & Safety and Employment Law Partner Citation says: "Risk rating allows you to identify the level of risk and prioritise your actions, as well as identify how your control measures have reduced a risk further. That doesn't mean that you only consider the higher risk – you should be reducing the risk to as low as reasonably practicable across the business. It is easy to become focussed on 'scoring' a risk assessment – you should be mindful when completing a risk assessment that the focus is on the hazards and control measures in place – the scoring is then just a reflection of how well those hazards can be controlled."

In practice this means we simply assign a value of 1-5 for the likelihood of the hazard causing harm and a value of 1-5 for the severity of the harm should it occur (1 being the lowest value, 5 being the highest). The two figures are then multiplied to achieve a risk rating score: L x S = R.

For example if a worker changes a light bulb in an indoor ceiling light using a stepladder twice a year then we can rate the likelihood as '1' due to the low frequency of the activity being performed. However as injuries as a result of falls from height can be serious (even from relatively short distances) then we can rate the severity as a '4', Using the calculation we multiply 1 x 4 = 4. This produces a 'Very Low' Risk Level on the Risk Rating Key.

Another example would be for a worker who regularly has to change light bulbs as a part of their job, sometimes outside and in adverse weather conditions. The likelihood would increase to '5', reflecting the regularity of the action and the potentially increased chance of falling while working outside on uneven ground and in bad weather, while the severity would remain at '4'. Again using the calculation we multiply 5 x 4 = 20. This returns a Risk Rating of High on the Risk Rating Key.

Likelihood								
Rating	Guide words							
1	Extremely unlikely							
2	Unlikely							
3	Likely							
4	Extremely likely							
5	Almost certain							

Severity		
Rating	Guide words	
1	No/Minor harm	
2	Moderate harm	
3	Serious harm	
4	Major harm	
5	Catastrophic	

RISK SCORE CALCULATOR							
	Severity						
		1	2	3	4	5	
	1	1	2	3	4	5	
Likelihood	2	2	4	6	8	10	
	3	3	6	9	12	15	
	4	4	8	12	16	20	
	5	5	10	15	20	25	

Risk Score → Risk Level Rating			
Score	Risk Level	Description	
1-4	Very Low	These risks are considered acceptable. No further action is necessary other than to ensure that the controls are maintained.	
5-10	Low	No additional controls are required unless they can be implemented at very low cost (in terms of time, money and effort). Actions to further reduce these risks are assigned low priority. Arrangements should be made to ensure that the controls are maintained.	
11-15	Medium	Consideration should be given as to whether the risks can be lowered, but the costs of additional risk reduction measures should be taken into account. The risk reduction measures should be implemented within a defined time period. Arrangements should be made to ensure that the controls are maintained, particularly if the risk levels are associated with harmful consequences.	
16-20	High	Substantial efforts should be made to reduce the risk. Risk reduction measures should be implemented urgently within a defined time period and it might be necessary to consider suspending or restricting the activity, or to apply interim risk controls, until this has been completed. Considerable resources might have to be allocated to additional controls. Arrangements should be made to ensure that the controls are maintained, particularly if the risk levels are associated with extremely harmful consequences and very harmful consequences.	

21+	very	These risks are unacceptable. Substantial improvements in risk controls are necessary, so that the risk is reduced to an acceptable level. The work activity should be halted until risk controls are implemented that reduce the risk so that it is no longer very high. If it is not possible to reduce risk the work should remain prohibited.
-----	------	---

Definitions:

Risk Assessment	A systematic examination of workplace risks in 5 steps: 1) Identify the hazards, 2) Identify who might be harmed and how, 3) Evaluation the hazard (by examining current controls and recommending further controls), 4) Recording the assessment and 5) Reviewing the assessment.
Hazard	Something with the potential to cause harm e.g. tools, machinery, work equipment, substances, workstation, unsafe system of work etc.
Harm	The damage that a hazard may cause e.g. physiological effects (physical injury, ill health) and psychological factors (e.g. stress), loss of time/efficiency and damage to the premises/equipment.
Likelihood	The chance that a hazard realises its potential to cause harm.
Severity	Extent of injury, damage etc.
Risk	The probability of a hazard actually causing harm.
Controls	Measures introduced or installed to reduce to a minimum the possibility of harm to persons, plant and property.
